Multi-User License Extension for ARM 8 Software for a Publicly Funded University/College or Government Institution

Purpose: You must execute this license agreement *before* installing ARM on any computer used by a person who is *not the ARM license holder*.

The standard ARM License Agreement allows Licensee to personally use ARM software on a maximum of two (2) computers provided the software is used only on one (1) computer at a time. **One (1) software package and standard license may not be loaded on multiple computers or a computer server, or used in multiple locations.**

With this License Extension, Gyilling Data Management, Inc. (GDM) permits the ARM Licensee in a Publicly Funded University/College or Government Institution whose signature is affixed on page 2 to install the ARM serial number listed on page 2 onto additional computers **at same location as the ARM Licensee** for use by persons who are not ARM Licensees. This License Extension is granted under the following conditions:

Place a check mark in every box below to verify that each statement is true.

All seven (7) conditions below must be met by all persons included in this License Extension.

1. The ARM Licensee is employed by a publicly funded government institution, university or college.
2. Each proposed additional ARM user under this License Extension is **not a Researcher or Research Director**, because each Researcher or Research Director must have his/her own separate ARM license. A group research project with multiple researchers must have multiple ARM licenses for their project.
3. Every person using ARM is at the same office location as the ARM Licensee.
4. ARM is installed only on computers that are university/college property, or personal property of Licensee.
5. Every person using ARM is directly supervised by the ARM Licensee or his/her designate.
6. Every person using ARM is employed by the same organization as Licensee.
7. The primary job description of each person covered under this License Extension is a **Research Assistant or Technician, Secretary, or Student** as defined below (or someone having a similar job description):

Jobs description of persons who qualify for a license extension:

Research Assistant / Technician performs tasks at a trial site on behalf of a researcher, usually under direct guidance of the researcher: help marking plots, help during trial preparation, help during application and assessments or exceptionally apply and assess on behalf of the researcher. "Under direct guidance" means that the technician for example is not entitled to decide on changing of plot size in the field or on specific maintenance activities, and does not design experiments.

Secretary typically gives administrative support to the researcher/study director. With regard to ARM typical tasks are data entry from data captured in the field on paper, printing reports using report sets defined by the study director/researcher.

Student is a full or part time student who is not pursuing a graduate degree under guidance or supervision of the researcher or research director.

Place a check mark in the box below to also apply this special License Extension for my Graduate Students.

- Additional computers on which ARM is installed are used by **Graduate Students** of the ARM Licensee.

This License Extension is *not valid* for computers that belong to a graduate student or a private organization.

Complete information on next page, sign, and return to GDM.
